

QGEP – the flexible open source tool for Wastewater and GEP

The screenshot displays the QGEP software interface. The main window shows a map of a wastewater network with various structures and pipes. A dialog box titled "vw_qgep_wastewater_structure - Feature Attributes" is open, showing the "Pictures" tab. The dialog box contains the following information:

Attribute	Value
class	wastewater_structure
expression	ch13p7mzf10
identifier	
kind	(no selection)
object	8488.0010
path_relative	NULL
remark	NULL
last_modification	2018-06-06T09:59:19

The interface also shows a Layers Panel on the left with the following layers:

- vw_qgep_wastewater ...
- vw_qgep_reach
- Wastewater Structures
- Inspection
- Value Lists
- Hydraulic
- Topology
- vw_network_seg...
- vw_network_node
- Cadastral Data

The Identify Results panel shows the following feature information:

Feature: vw_qgep_wastewater_structure

- location_name
- (Derived)
- (Actions)
- obj_id

The status bar at the bottom shows the following information:

Coordinate: 2750551.90, 1264918.48 | Scale: 1:117 | Magnifier: 100% | Rotation: 0.0 | Render: | EPSG:2056 (OTF)

QGEP – die flexible open source Fachschale für Abwasser und GEP

The screenshot displays the QGEP software interface. The main window shows a map of a wastewater network with various structures and pipes. A dialog box titled "vw_qgep_wastewater_structure - Feature Attributes" is open, showing the "Pictures" tab. The dialog box contains the following information:

Attribute	Value
class	wastewater_structure
Expression	ch13p7mzf10
identifier	
kind	(no selection)
object	8488.0010
path_relative	NULL
remark	NULL
last_modification	2018-06-06T09:59:19

The interface also shows a Layers Panel on the left with the following layers:

- vw_qgep_wastewater ...
- vw_qgep_reach
- Wastewater Structures
- Inspection
- Value Lists
- Hydraulic
- Topology
- vw_network_seg...
- vw_network_node
- Cadastral Data

The status bar at the bottom shows the coordinate system as EPSG:2056 (OTF) and the scale as 1:117.

Current Members & Organisational

Since 2019 the group consist of 12 members (+3):

- Fischer Ingenieure, Arbon (Konradin Fischer)
- Holinger Thun AG (Urs Kaufmann)
- Service Intercommunal de Gestion (SIGE) (Kevin André)
- Ville de Morge (Roger Maurer)
- Ville de Prilly (Maxime Trolliet)
- Géoconseils SA, Colombier (Max Loriol / Valentine Arrieta)
- Ville de Lausanne, Service de l'eau (Dominique Zürcher)
- Alpnetsystem SA (IG-Group), Sion (Timothée Produit)
- **Gruner Böhringer AG, Basel (Raphael Brügger)**
- **Triform SA, Fribourg (Daniel Hollenweger)**
- **Ville de Pully (Alexandre Bossard / Arnaud Poncet)**
- Stefan Burckhardt (SJiB) as technical advisor and coordinator
- *Ville de Vevey (Daniel Gnerre)*

They are supported by Matthias Kuhn /Denis Rouzaud (OpenGIS)
Cooperation with qwat integrator Oslandia

Latest Developments 2019

- Collecting data in 3D - use of 3D extension of VSA-DSS data model
- Automatic creation of views with pirogue tool
- Data model customization
- Using QGIS Processing tools: New functions (change reach direction, aggregate values along network (flow time calculation), connecting
- Project translation (now part of QGIS 3) - adaptation for QGEP in German and French
- Documentation updated

Collecting data in 3D - use of 3D extension of VSA-DSS data model

- Data model VSA-DSS uses coordinates (x,y) for geometry
- Height (z) is stored in additional attributes such as bottom level.
- Introducing 3D coordinates needs mechanism to keep 3D coordinates and z-Attributes [in synchronization](#) during
 - Digitizing
 - Editing
 - Deleting

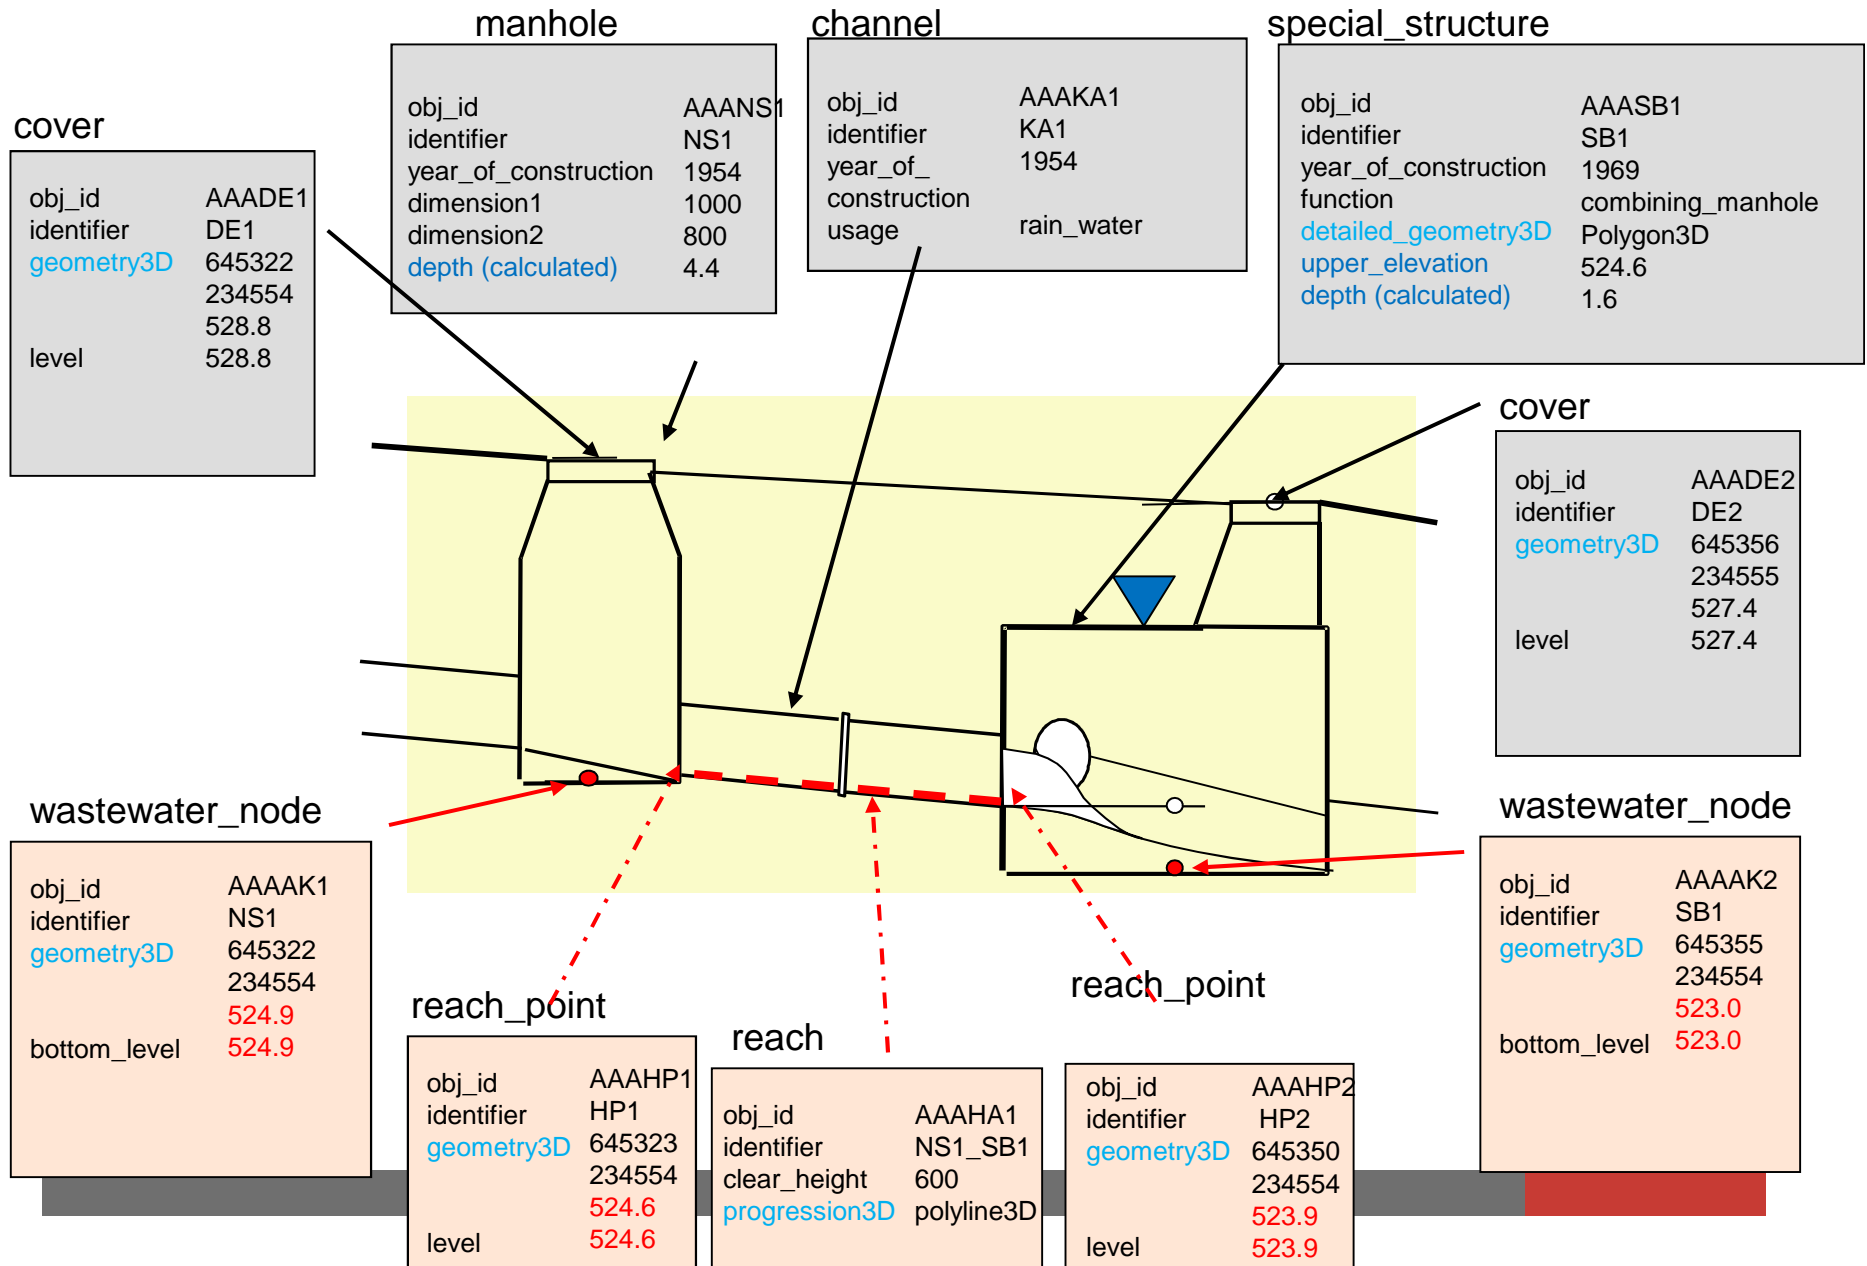

Waste water structure and network topology (plan view)

Waste water structure and network topology (elevation) 3D

Waste water structure and network topology (elevation) 3D

Automatic creation of views

With **pirogue**, a tool to automatically create views and triggers on PostgreSQL databases developed by Denis Rouzaud (Opengis) in cooperation with qwat

<code>pirogue.Merge</code> (definition, pg_service, ...)	Creates a merge view with associated triggers to ed
<code>pirogue.Join</code> (parent_table, child_table, ...)	Creates a simple join view with associated triggers t
<code>pirogue.information_schema</code>	
<code>pirogue.utils</code>	
<code>pirogue.exceptions</code>	

<https://github.com/opengisch/pirogue>

Rules for data model customization

- First check, whether your attribute is not already part of VSA-DSS model
- Discuss with user group about new user attribute
- User attributes start with **usr_***
- If added in base tables, these additional fields will be automatically added to the views, being an editable field. The views can be re-generated any time using the following command:

```
./view/create_views.py --pg_service pg_qgеп --srid 2056
```

Postgres Upgrade Manager (PUM)

- Tool to administrate different versions of your database
- Automatic control whether changes made fit a specific version of the datamodel
- Delta scripts for each model version – QGEP currently on 1.3.0 ([latest](#))
- Developed together with qwat
- [Detailed presentation](#) can be found online QGIS Schweiz Anwendertag 2018
- PUM currently runs well on Linux, but there is **no user interface for Windows**
- Please contact us if you are interested in **helping to sponsor the development of this (5 – 10 k)**

New processing functions for QGEP

- New functions
 - [change reach direction](#)
 - aggregate values along network ([flow time calculation](#))
 - [Snap reach geometry](#)

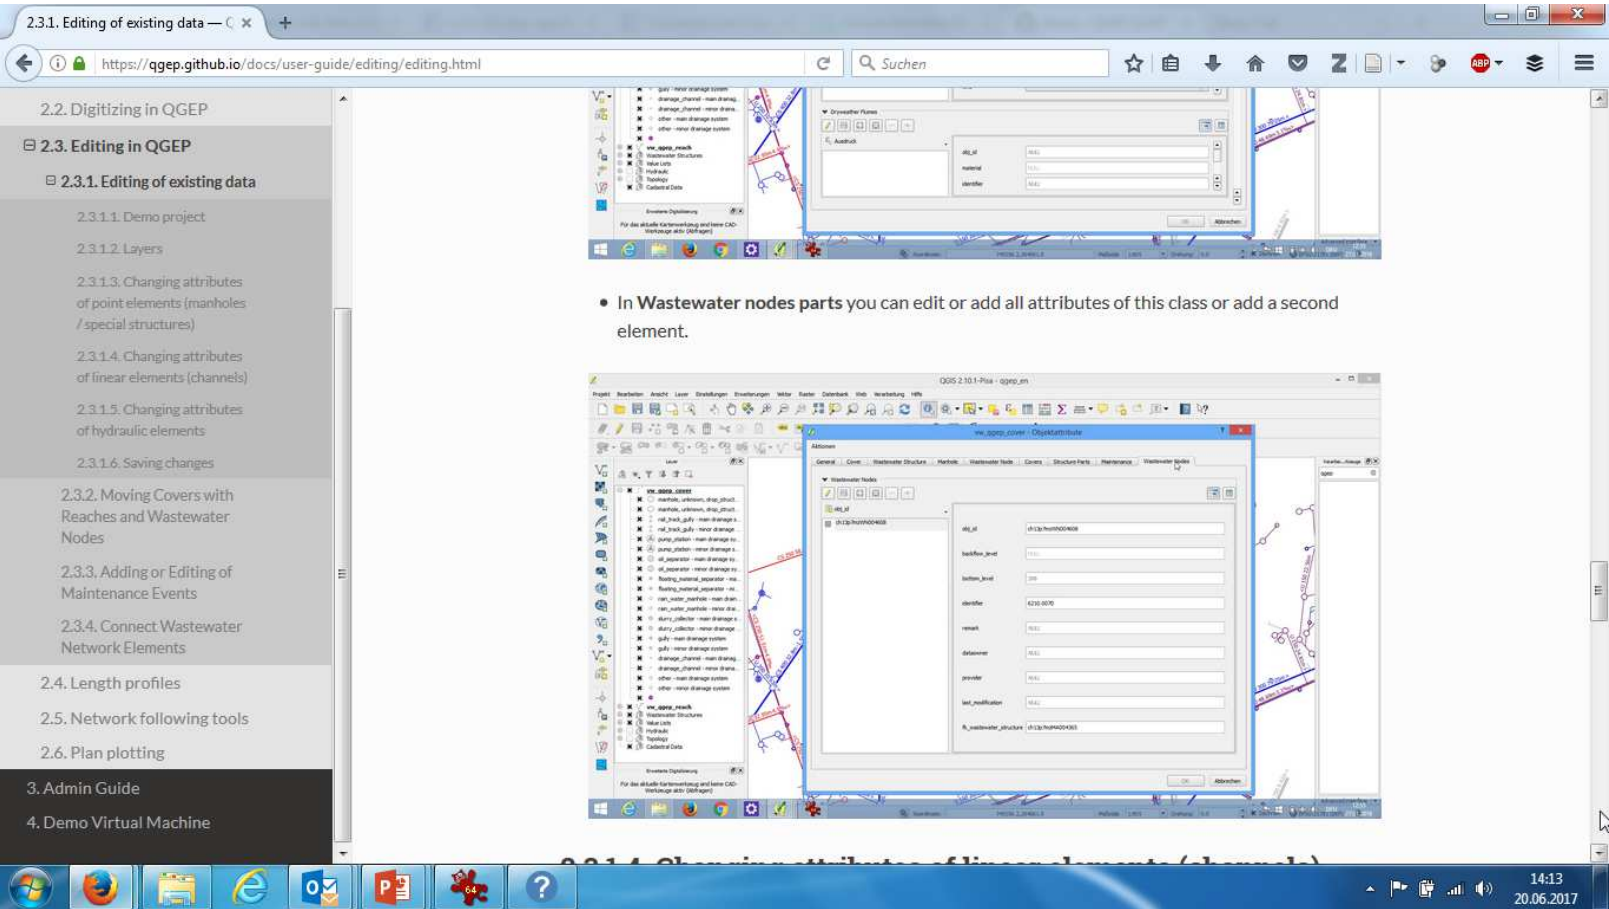

New Project Translation Function

- Support of development of [Project Translation Function](#) in QGIS 3.4
- Needed to maintain QGEP in German, French, English, Italien, ...

Updated documentation in English, Deutsch, Français

The screenshot shows a web browser window with the URL <https://qgep.github.io/docs/user-guide/editing/editing.html>. The page content includes a table of contents on the left and a main area with a screenshot of the QGEP software interface. The software interface shows a project tree on the left, a central map area, and a 'Wastewater Nodes' dialog box on the right. The dialog box has fields for 'id', 'name', 'description', 'parent', 'type', 'category', and 'structure'. Below the screenshot, there is a bullet point:

- In Wastewater nodes parts you can edit or add all attributes of this class or add a second element.

<https://github.com/QGEP/docs>

Planned Developments 2019 / 2020

- Update existing **SWMM** (hydraulic simulation software) plugin and develop import / export interface for QGEP
- Improve **network following algorithm** to be able to:
 - select (all) connected elements (such as catchments)
 - select subsets (e.g. one or several branches)
 - combine the two for export selection of data (to INTERLIS or SWMM)
- Extend data model for **log cards** (Stammkarten) and create necessary views to display those (many cantons are currently starting to requiring this)
- Implement workflow for importing **VSA-KEK data** from WinCan X and develop workflow for export / import of network data to / from channel TV inspection companies (new network data, updated network data)

SWMM Plugin

The screenshot displays the QGIS 2.18.13 interface. The main window shows the Processing Toolbox on the right, which lists various algorithms. The 'Swmm (Storm Water Management Model)' plugin is expanded, showing a 'Simulation' sub-category with the algorithm 'Simulate flow in storm water conveyance systems'. The dialog box for this algorithm is open, showing the 'Parameters' tab. The parameters are as follows:

- Baseline dry weather sanitary inflow at nodes [optional]: [Not selected]
- Periodic variation in dry weather inflow [optional]: [Not selected]
- Rainfall-dependent I/I information at nodes [optional]: [Not selected]
- Initial pollutant loads on subcatchments [optional]: [Not selected]
- x-y tabular data referenced in other sections [optional]: curves
- Time series data referenced in other sections [optional]: [Not selected]

The 'Time series data' dropdown menu is open, showing the following options: evaporation, inflows, junctions, options, outfalls, pumps, report, storage, **timeseries**, and xsections. The 'timeseries' option is highlighted. A 'Run as batch process...' button is visible in the top right corner of the dialog box.

SWMM Export / Import & Plugin

- Update existing SWMM plugin and develop import / export interface for QGEP
- Total cost 15 k
- Already covered by QGEP group Phase 1: 7 k
- Additional funds needed for Phase 2: 8 k
- **Contact us if you would like to join in and sponsor this development**

Steps		June	July	August	September	October	November	December
Dev Phase 1	Creation development environment (GIT structure, etc)	█						
	QGEP2SWMM views and copy data into dedicated tables	█						
	Creation SWMM input file	█		█				
	Basic import of results in QGEP-SWMM schema	█		█				
	Validation (S. Burckhardt, M. Kuhn) / Correction (IG Group)			█	█			
Dev. Phase 2	Import SWMM output in QGEP datamodel				█	█		
	Creation of QGIS project (symbology according to the indicators)				█	█		
	Integration of the commands in QGIS processing tool					█	█	
	Validation (S. Burckhardt, M. Kuhn) / Correction (IG Group)							█

Improve network following algorithm

- Improve network following algorithm to be able to:
 - select (all) **connected elements** (such as catchments)
 - select **subsets** (e.g. one or several branches)
 - combine the two for export selection of data (to INTERLIS or SWMM or TV inspection)
